

Security check sheet

This check sheet is a check sheet that lets you know how conscious you are about security. Please check it once, if there is a problem review the item!

*The less check is perfect

#Password relation

- Your birthday is Your password.
- Too easy password.(ex.a, 12345, abcd etc.)
- Too short password.
- Only numbers.
- Not combining uppercase and lowercase letters.

#Virus and Security relation

- Not install the security soft.
- Invalidation the firewall.
- I have never scanned viruses.
- I used USB that was handed off by someone other than a trustworthy person.
- I have accessed the mail link of an unknown destination.
- I have visited suspicious sites.

#Wi-Fi relation

- Using WEP.
- I have not changed the security code of the router.(ex. 1234 etc.)
- Sometimes you have connected to WiFi without using the free Wi - Fi connection application.
- I did not check anything and it was connected to free wifi.
- When you use free Wi-Fi, you are inputting personal information without thinking anything.

#Free soft relation

- I download free software from a site that I can not trust or have never seen.
- Do not read the terms of use during installation.
- Skipping without reading the settings during installation.
- I have mistakenly pushed the download button of burner advertisement.

#Port forward relation

- I opened a port without understanding the mechanism of port opening.
- I opened a port that I do not need.
- Sometimes I opened a port with an OS that ended support.

#IoT relation

- Ignoring security patches.

#Encryption relation

- Sometimes I entered personal information on a site that does not have a key mark in the URL.
